

Job Management

All tasks, such as importing data, segment activation, and data export, create jobs. Because each task runs as a job, you do not have to wait for one job to finish before you start the next action. This section describes how to work with jobs.

Treasure Data Job Status

Treasure Data jobs can have the following status:

- Running – The job is in progress.
- Error – The job was not successful. Or, some of the job's tasks were completed successfully. This could be a job with multiple tasks, in which some tasks completed but others failed, or a job with multiple targets, in which the job was successful for only some targets.
- Killed – A user stopped the job.
- Queued – The job has been scheduled to run at a specific time. It might be a one-time job or a recurring job.
- Success – The job has completed.
