raise_error("Create bulk import failed", res, body)  
File "/usr/local/lib/python3.6/site-packages/tdclient/api.py", line 367, in raise_error raise errors.  
AlreadyExistsError("%s: %s" % (msg, s))  
tdclient.errors.AlreadyExistsError: Create bulk import failed:  
{  
  "error": "[\\"Name has already been taken\"]",  
  "message": "[\\"Name has already been taken\"]",  
  "text": "[\\"Name has already been taken\"]",  
  "severity": "error",  
  "status_code": 409  
}
```

Description

create_bulk_import failed with an error.

Cause

Job is executing the same exact query twice will cause two distinct queries to be executed on Treasure Data.

```
print(f'Writing to table {schema_name}.{table_name}') session_name = "session-%d" % (int(time.time()),)  
bulk_import = self.tdclient.create_bulk_import(session_name, schema_name, table_name)
```

session_name was not unique which caused to fail.

Resolution

Submit a job with unique session_name. Add the random number to the session name.

```
print(f'Writing to table {schema_name}.{table_name}') session_name = "session-%d-%d" % (int(time.time()),random.  
randint(1,10001)),)  
bulk_import = self.tdclient.create_bulk_import(session_name, schema_name, table_name)
```
