

# Slemma Integration

Slemma is a web-based solution for data-exploration and reporting that operates on top of your database.

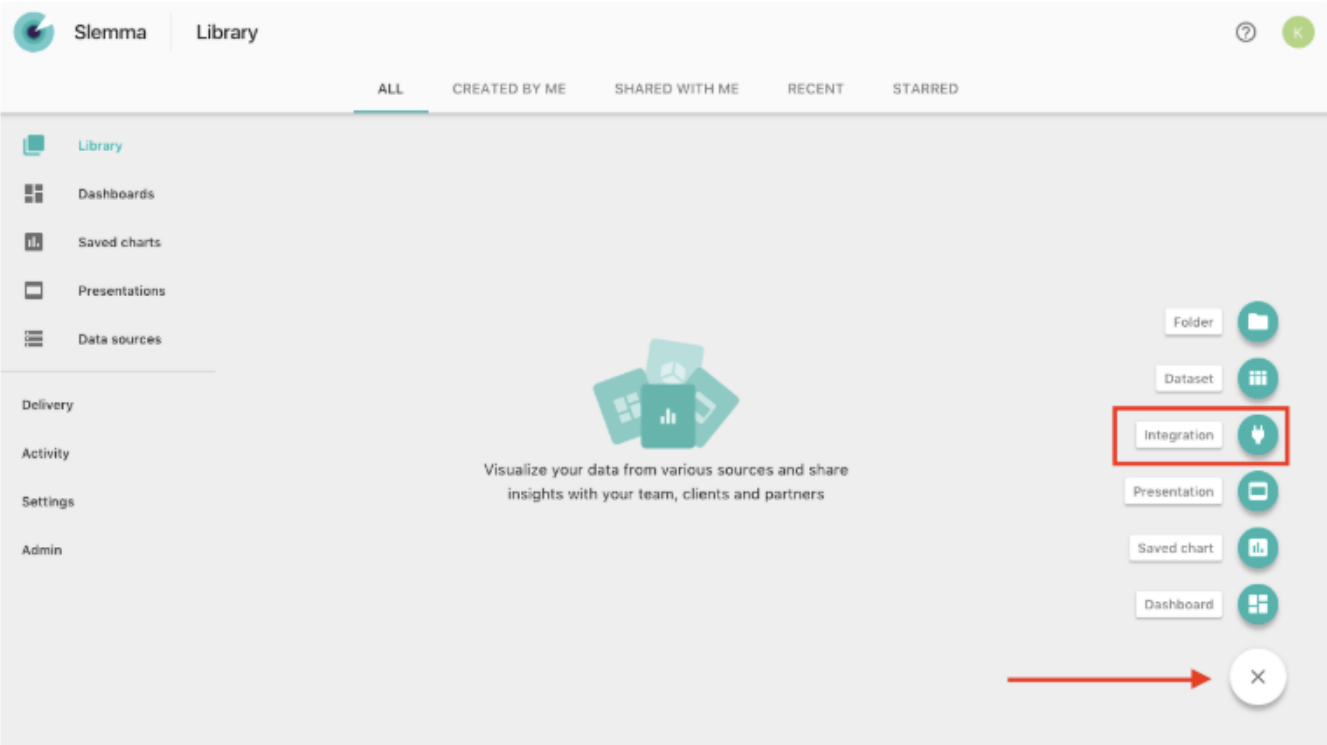

- [Prerequisites](#)
- [Create Integration](#)
- [Create Datasets](#)
- [Build a Chart](#)

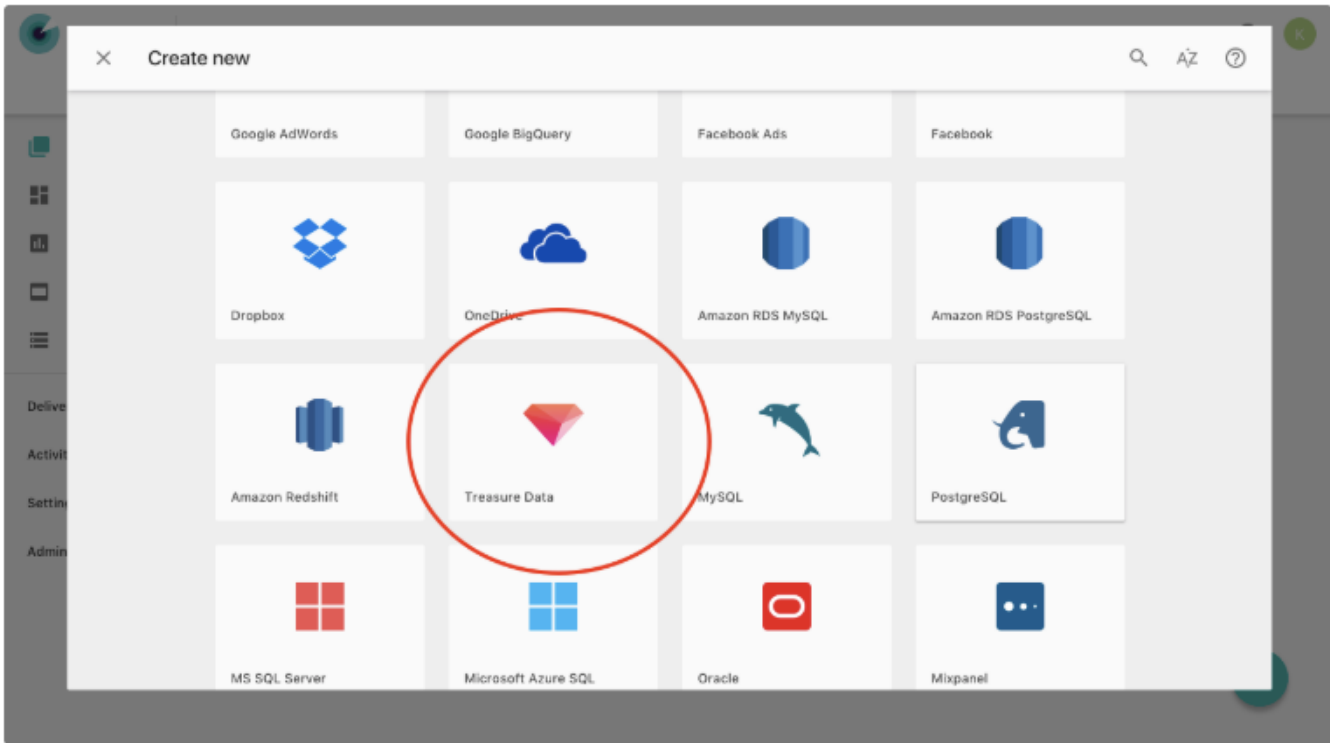

## Prerequisites

- Slemma account
- Treasure Data account with **Presto** Plan
- Basic knowledge of Treasure Data

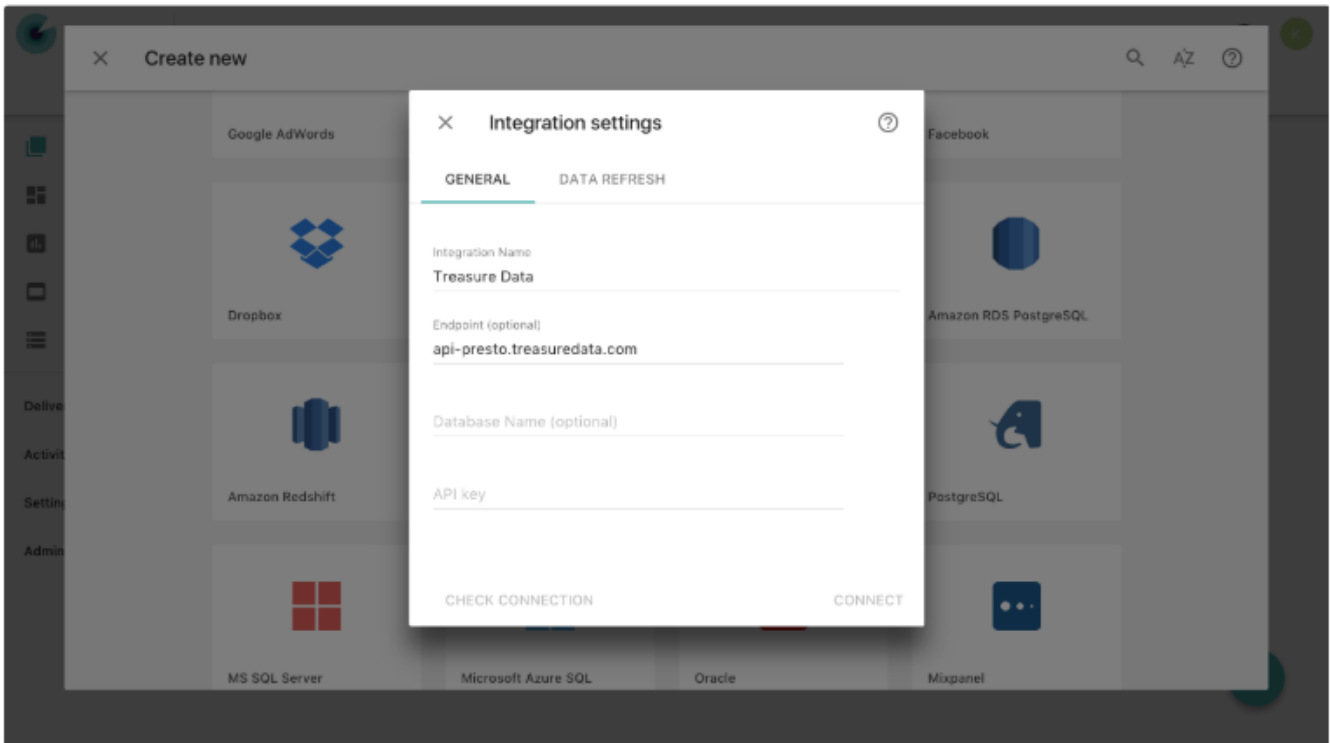

## Create Integration

Go to Integrations Hub > Catalog. Search and select Treasure Data.

Edit the Endpoint, Database Name, and API key, which is your destination Treasure Data endpoint and Master API key.

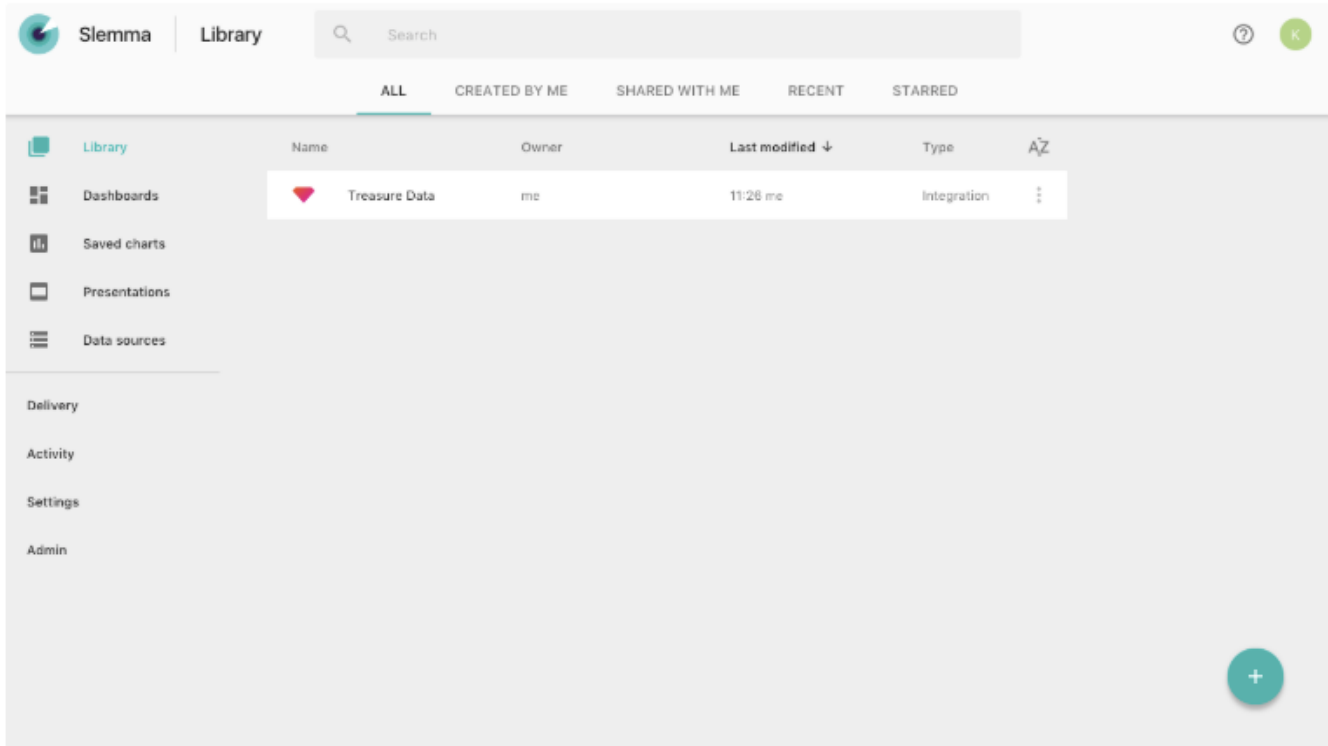

- Integration Name: Treasure Data
- Endpoint: [api-presto.treasuredata.com](https://api-presto.treasuredata.com)
- Database Name: YOUR DATABASE NAME
- API key: YOUR MASTER API KEY

Select **Check Connection** to verify the connection.

Select **Connect** to finish setting it. You can select the type of dataset you want to create based on this integration.

The Treasure Data integration item is visible. For example:

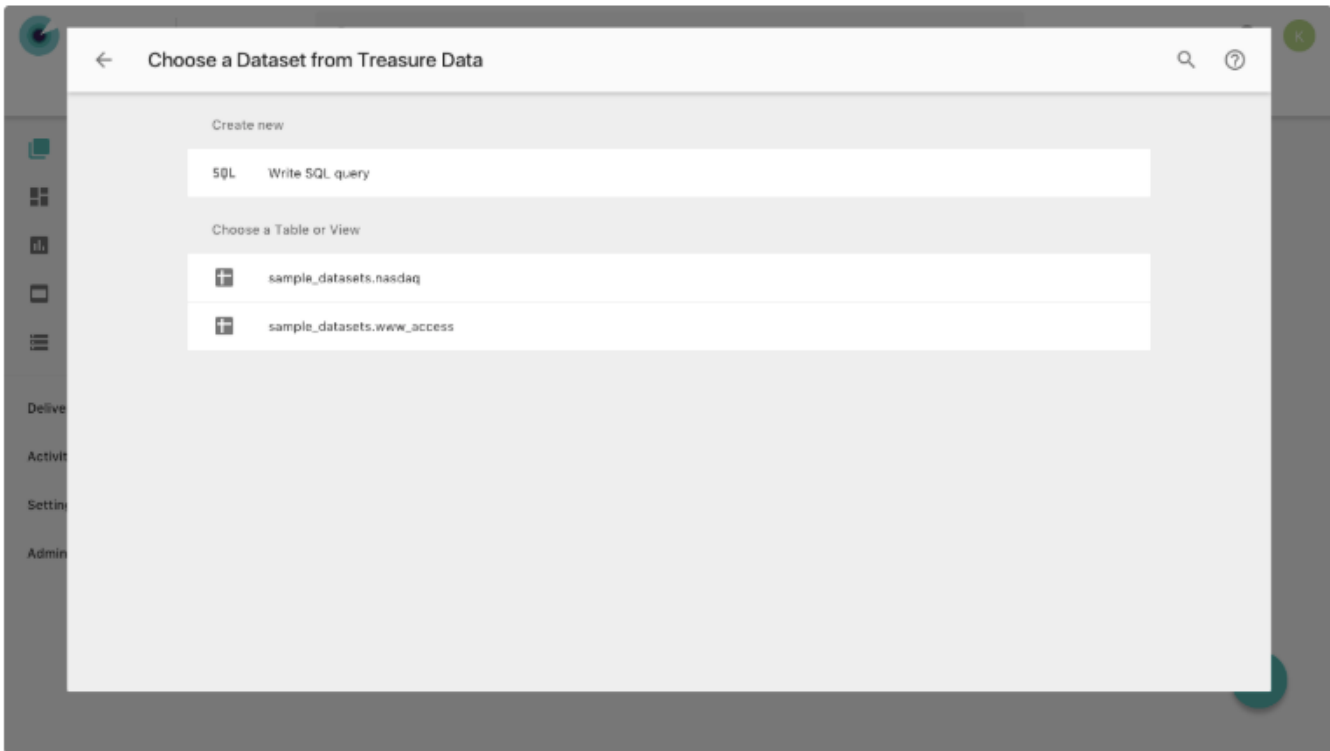

## Create Datasets

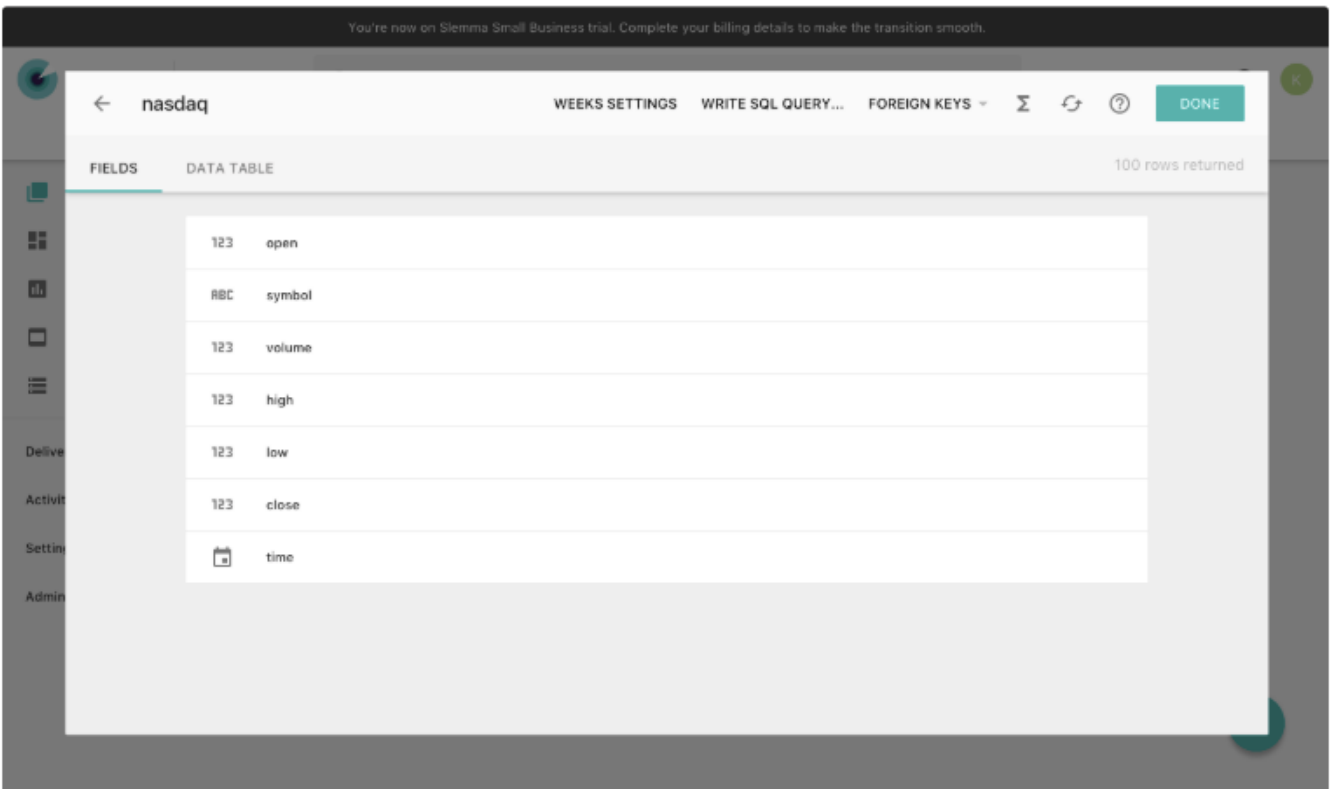

Visit the Dataset menu, and select an integration item you created.

Select from one of two options for extracting data from Treasure Data:

- Write SQL query
- Choose a Table or View

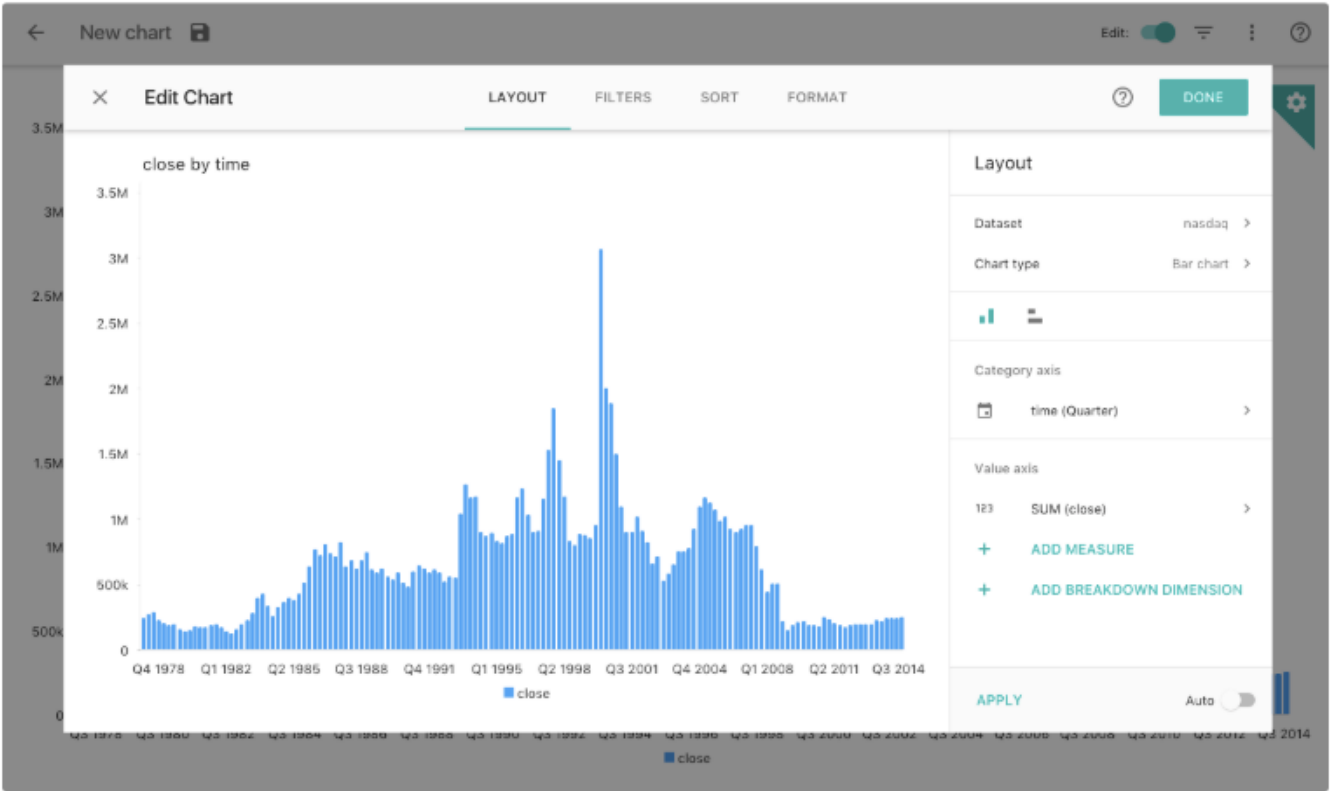

After choosing an extraction option, you can see a preview of the data.

## Build a Chart

Select any dataset and choose **Create chart** or **Create dashboard** options.
