

Database and Table Management

Treasure Data uses databases and tables. Each database can contain several tables. For Treasure Data, each table can belong to only one database. You can manage your Treasure Data tables and databases using one of the following interfaces:

- TD Console
- TD Toolbelt

You can use TD Console to manage your Treasure Data databases and tables.

1. Open the TD Console. <https://console.treasuredata.com>
2. Navigate to Workbench > Databases.
3. Add, delete, modify your databases and tables as necessary.

The screenshot shows the 'Data Workbench' interface in the TD Console. The left sidebar contains navigation options: Queries, Workflows, Databases (selected), and Profile Sets. The main area displays a table of databases with the following columns: Name, Tables, Records, Last Imp..., and Permission. There are 1261 databases in total, and a 'NEW DATABASE' button is visible in the top right.

Name ^	Tabl...	Records	Last Imp...	Permission
000_000_test_2977 0 bytes	3	513	Oct 19	administrator
1111_box_gs_01 0 bytes	29	7,064	Oct 12	administrator
111_gs_test_box 0 bytes	5	56	Aug 24	administrator
