

AdRoll Import Integration

AdRoll provides access to campaign performance and delivery data (impressions, clicks, and conversions) via AdRoll SQL. You can integrate this raw data directly into Treasure Data using our data connectors.

Refer to the following article to learn how to configure AdRoll SQL to send data to a warehouse of your choice (Postgres or Amazon Redshift). You can also use Treasure Data's [Data Tanks](#) service.

- [AdRoll SQL Setup](#)

When your warehouse is enabled, you can easily integrate this warehouse into Treasure Data using our pre-existing connectors for Postgres or Redshift.
